

I Claim:

1. A system for locating lost or misplaced items, comprising:
 - a transmitter unit for attachment to the item to be located;
 - the transmitter unit including a buzzer and a light emitting diode that can be selectively actuated for locating the item;
 - the transmitter unit including a DC power source for providing power to the buzzer and the light emitting diode; and
 - a pager unit for mounting to a wall surface, the pager unit having a manually operable push button that upon actuation transmits a signal to the transmitter unit thereby activating the light emitting diode and the buzzer so that the item can be located.
2. A system for locating a lost or misplaced household item, comprising:
 - a transmitter unit for attachment to the item to be located;
 - the transmitter unit including a speaker and a light emitting diode that can be selectively actuated for locating the item;
 - the transmitter unit including a DC power source for providing power to the speaker and the light emitting diode;
 - a pager unit removably mountable to a flat surface, the pager unit having a manually operable push button that upon actuation transmits a signal to the transmitter unit thereby activating the light emitting diode and the speaker so that the item can be located.
